

Configure an iPhone 2.1 or later with ActiveSync (Exchange 2010)

- **Synopsis**

This guide will show you how to configure your iPhone version 2.1 or later with Exchange 2010 ActiveSync.

- **How to**

Note: If you have recently updated the firmware on your iPhone, turn off your device and then turn it back on. Failure to do so will not allow you to successfully connect to Exchange with the settings below.

1. In the main screen, select **Settings**
2. Select **Mail, Contacts, Calendar**.
3. Press **Add Account**.
4. Select **Microsoft Exchange**.
5. Enter your hosted Exchange email address in the **Email address** field, leave the **Domain** field blank, enter your main email address in the **Username** field, your Exchange account password in the **Password** field and then press **Next**.
6. In the **Server** box, enter **webmail.domainlocalhost.com** and then press **Next**.
7. On the next screen, select **Info to synchronize with your Exchange account** and then press **Done**.
8. You will find yourself back to the *Mail, Contacts and Calendar* default screen. You may adjust your mail settings according to your preferences.

Note: Your iPhone will automatically synchronize the last three days of emails.

To synchronize older messagers:

9. Select **Settings**.
10. Select **Mail, Contacts, Calendar**.
11. Press **Microsoft Exchange**.
12. Press **Mail days to sync**.
13. Select from **No Limit to 1 Month**.

Note: By selecting No Limit, you will synchronize all the messages found in your mailbox.
